L13 ANSWER 17 OF 43 CAPLUS COPYRIGHT 2010 ACS on STN  
 AB   The title method comprises (1) diluting any liqs. (excluding  
       alcs.) in an alc. solution, (2) shaking the resulting solns., (3)  
       repeating the steps of diluting and shaking multiple times, and  
       (4) impregnating the product into a solid saccharide.

L13 ANSWER 28 OF 43 CAPLUS COPYRIGHT 2010 ACS on STN

AB Carrier solvents in pharmaceuticals should be excipient. Ethanol  
 in liquid preps. intended for children is an industry decision  
 but it is a metabolically active substrate, sometimes found in  
 subtherapeutic or subtoxic doses. Worst offenders in this respect  
 are prescription drugs for long-term treatment which inevitably  
 subject patients to chronic passive exposure. One hundred three  
 such preps. were identified from the Italian pharmacopoeia with  
 more than 20 mg/dL ethanol. OTCs and homeopathic remedies were  
 also found to contain large amts. (up to 60% volume) of ethanol  
 with even less clin. need or benefit. Domestic sources other than  
 medicinals were found to account for negligible amts. (>2 mg/dL).  
 Hepatic and extrahepatic enzyme route switching, hepatic blood  
 flow and plasma clearance are all age-dependent and the growth  
 process itself is increasingly thought to impact on drug  
 pharmacokinetics. The implications for pediatric prescribers are  
 that trademarks for the same active ingredient should be  
 differentially assessed against expected length of treatment and  
 ethanol amts., preferring non-alc. alternatives whenever possible.  
 Yet the medical literature has paradoxically ignored the need for  
 a toxicol. re-assessment of ethanol in children medications and  
 acceptable risk thresholds have not been determined

L13 ANSWER 29 OF 43 CAPLUS COPYRIGHT 2010 ACS on STN  
AB A method of therapy for drug addiction is claimed. Potentiated  
morphine, prepared by repeated and successive dilution and  
agitation of morphine solution or a mixture of opium alkaloids  
containing 50-95 weight% morphine, morphine hydrochloride, and  
apomorphine or other morphine derivs. are used practically as  
homeopathic prepsns. The combined administration of potentiated  
morphine and an addnl. potentiated homeopathic remedy, derived  
from the original habitual narcotic substance for which a patient  
has a pathol. craving, is suggested for periods of critical  
intoxication and abstinence.

L13 ANSWER 30 OF 43 CAPLUS COPYRIGHT 2010 ACS on STN

AB The present invention relates mainly to a drug regimen involving  
ethanol amplified by diluting and shaking it many times according  
to a homeopathic method consisting in taking as a starting  
material Et alc. and diluting it in the ratio of 100/10000. The  
preferred embodiment consists in combining amplified ethanol and  
morphine, obtained by diluting and shaking them many times  
according to said homeopathic method, either from an opium  
alkaloid or morphine or a mixture of opium alkaloids with a mass  
of 65 to 95 % of morphine or from hydrochloride morphine diluted  
in the ratio of 200/1000.

L13 ANSWER 32 OF 43 CAPLUS COPYRIGHT 2010 ACS on STN

AB The present invention relates to an agent for acting upon the organism and to biol. active substances. This invention more precisely relates to a potential preparation which is obtained by repeatedly cultivating and shaking a specific starting product having toxic properties and being poisonous to the organism (narcotics, alc., nicotine, industrial poisons, military poisonous substances). In order to cure alcoholism, this method uses ethanol as a starting substance during the potentialization, while it uses an opium alkaloid, morphine or morphine hydrochloride for curing drug problems. The potential agent of the present invention may be used in any medical homeopathic form and preferably together with the starting product.

AB Said invention is characterized by the application of a small and  
 mini doses of an activated medical substance in the form of an  
 agent for potentiating curing effects, i.e. enhancing action of  
 the therapeutic dose of the same medical substance.

 AB Method is disclosed for the treatment of chronic relapsing lip fissures and combinations of chronic relapsing lip fissures with exfoliative or atopic cheilitis. Method involves administration of proteolytic enzyme, application of an ointment of the complex composition on fissure and entire red border of the lips, administration of lidocaine blockade with premedication with apo-diazepam at the dose of 5 mg by sublingual route, using ointment "Lorinden C", application of He-Ne laser treatment on damaged lip sites, administration of anti-histaminic preps., antiallergic diet and correction of psycho-emotional state. Treatment is carried out on the background of every day application of oral gels for lips protection and polyvitamins intake. Homeopathic ointment "Traumel" is prescribed for children instead of ointment "Lorinden C". Method ensures high effectiveness of treatment with the following absence of the relapses of the disease; neuro-dystrophic, inflammatory processes around lips and perioral skin are eliminated.

L15 ANSWER 3 OF 4 CAPLUS COPYRIGHT 2010 ACS on STN  
 AB The inventive curative method for a pathol. syndrome consists in  
   inserting into an organism activated forms of minute antibody  
   doses which are produced by means of a repeated successive  
   dilution and an external action carried out on an antigen, e.g. a  
   substance or medicinal preparation influencing a mechanism forming  
   said pathol. syndrome. The inventive medicinal preparation for  
   curing the pathol. syndrome comprises an activated form of minute  
   doses of monoclonal, polyclonal or natural antibodies. Said  
   antibodies are produced by means of a repeated successive dilution  
   and an external action, preferably using homeopathic technol.,  
   which is carried out on an antigen, e.g. a substance or medicinal  
   preparation directly promoting the formation of the pathol.  
   syndrome or participating in regulating mechanisms for the  
   formation thereof. Activated forms of minute doses of antibodies  
   to the antigens of an exogenic and endogenic nature, autoantigens  
   and fetal antigens, are used. Anti-idiotypic antibodies are also  
   used.

AB An analgesic, antipyretic, anti-inflammatory, anti-influenzal  
 preparation is disclosed which comprises (parts by weight) aspirin  
 10-500, paracetamol or ascorbic acid 10-500, caffeine 1-50,  
 diazepam 1-50 or amitryptiline 1-20 or thioridazine 1-20, or  
 hydroxyzine 1-20 or promethazine 1-30, or a mixture of 1-50 parts  
 phenylpropanolamine and 1-50 parts chlorpheniramine or a mixture  
 of 10-5000 parts propyphenazone and 1-50 parts codeine and a

mixture of 1-50 parts homeopathic preps. of Aconitum, Gelsemium, Eupatorium, Echinacea, Bryonia, or a mixture of 0.01-10 parts homeopathic preps. of white arsenic, Hydrastis, Phytolacca, Medorrhinum, Mezereum, iron phosphate, Influenzium, phosphorus triiodate, Sambucus, and pharmaceutically acceptable excipients.

The preparation may be formed into tablets or capsules.
